Actually, there are so many that it is almost impossible to choose between them. but when it comes to the right combination of features and oability on the iPhone screen too-tiny-for-video-editing, we like splice. spliceplatform: iPhoneprice: freedownloads pagefeatures easily add visual effects and add filters in audio and music directly from the app or from your library includes a variety of text overlaps easily adjust the speed of clips add narrative in the different appoptions for transitions between clips simply cut, cut and cut videexport video in 1080p ken burns effect for photos where eccelle puts blur, its biggest selling point is free and does everything that makes apple movies. splice makes quick editing video together simple, and clip editorprecise threading less than a core that is in other applications. Simply also packs in embedded filters to make your videos look a little more stylized. text overlays for adding in fresh textand a large library of audio to be added in musical or sound effects. The most important thing, however, Splice is very easy to use and in a few minutes it will be editing your videos in small epic movies. Splice is very made for amateurs trying to quickly create home video or join something for social media. It is not intended for editing full movies, but nothing on the iPhone is really. Where it falls short My biggest complaint on Splice is the scrubber, or the lack of one. In video editing mode, it is difficult to get to precise moments in a long project, which is frustrating. There is a solution if you switch to the audio editor board, which has a large small scrubber, but it is hateful that you have to do it. In addition to this, Splice is quite limited, so do not expect a ton of options or features. There is no video changes like exposure, highlights and shadow levels, and it doesn't have much in the audio editing mode outside the trim and volume. It is built as an easy way for amateurs to string together various clips in a single video, add a little text, and call it a day. It is not intended for much more and difficult to push it beyond any intended use. Competition As we mentioned at the beginning, you have a lot of options for editing videos on the iPhone and everyone fits into their small niche. Apple's offer, iMovie (\$4.99), is pretty cursed on the desktop, but manages to do very well when it comes to mobile video editing. If you're just throwing a handful of clips together, iMovie makes it easy to add a video a project, throw into some transitions, add a quick backup soundtrack, and send it to your friends. It lacks a lot in the way of customization or style, but it has enough features that are worth \$5 if you are looking for a little more than Splice. Adobe Premier Clips (Free) is another runner up and has some worth of note. It syncs with Adobe Premier desktop app, has an automaticthat instantly adds music, allows you to add photos with a subtle zoom, and plays well with the rest of Adobe applications. If you're just editing a handful of short videos, I really like Clips (Free). Clips makes it incredibly easy to connect different videos together, add in voiceover, change speed, add transitions, and add music. The learning curve on Clips is also very small, so you will be creating videos in no time. Unfortunately, there are no common features such as several integrated transitions and musical options. For something between Clips and iMovie, Vidlab (free with in-app purchases) is a good choice. Vidlab has all kinds of great things in it, including a ton of video effects, various filters, a group of text options, and also some integrated animations. Vidlab is very made to make and edit videos for social media, but it is rich in enough functionality that is still strong enough for editing videos. Joe Hindy / Android Authority Video editing is one of the heaviest tasks a device can perform. It is also good enough for some pro vlogging with a little patience. Here are the best video editor apps on Android, at least until Premiere Rush CC makes it for Android.
